

Clinical Free Text to HPO Code

i - About this app

- This is a web app based on Phenotagger's Streamlit Demo (Phenotagger is a dictionary and deep learning-based model): <https://huggingface.co/spaces/lingbionlp/PhenoTagger-Demo>
- The following features have been added:
 - comparison of annotation results with the current SOTA model Phenobert (<https://github.com/EclipseCN/PhenoBERT>)
 - user selection from the identified HPO codes
 - a search bar for users to enter phenotypes that the models may have missed which uses the Human Phenotype Ontology API (<https://hpo.jax.org/app/>)
